

# SuperFlow

**EXCEEDING EXPECTATION**

## SuperFlow – Ventilators

The SuperFlow ventilator system is effective all year-round, removing super hot or moisture laden air from roof cavities and replacing it with fresh outside air. Greatly improves the interior comfort of your home. **ENERGY FREE!**

### SuperFlow Colours

**Standard:** Mill finish (silver)

Basalt	Manor Red	Surfmist
Classic Cream	Monument	Wallaby
Cottage Green	Night Sky	Wilderness
Deep Ocean	Pale Eucalypt	Wind Spray
Dune	Pale Terracotta	Woodland Grey
Ironstone	Paperbark	
Jasper	Shale Grey	

*These colours may be non-standard in some states and price may differ.*

### Wind driven Superflow ventilators help you:

**KEEP COOLER IN SUMMER**

**REDUCE GREENHOUSE GASES**

**SAVE ON ENERGY COSTS**

**ENJOY YEAR ROUND COMFORT**

**Unique SuperFlow Fan**

PROUDLY AUSTRALIAN OWNED | PROUDLY AUSTRALIAN DESIGNED | PROUDLY AUSTRALIAN MADE

# SuperFlow

## How it works and saves

SuperFlow ventilators exhaust the very hot air that becomes trapped in the space between the ceiling and roof covering. This prevents heat radiation into rooms and helps lower inside temperatures.

A well ventilated home is protected from problems associated with moisture condensation and temperatures that can soar to a blistering 60°C in summer. In hot humid localities, mould, mildew, dry rot, and damp insulation (which is inefficient when wet) is often encountered.

Normal insulation is not enough to prevent heat radiation into your home. With effective roof space ventilation less heat is radiated into rooms allowing air-conditioners and fans to cope more easily and save on power too.

SuperFlow ventilators use the free energy of the wind 24 hours a day, every day of the year... more comfortable conditions year-round.

### SuperFlow away heat

Under eave vents aid roof space air circulation.

### SuperFlow away damp

Under eave vents aid roof space air circulation.

## How many ventilators for larger homes?

Many homes need just one but for greater satisfaction allow two (2) for homes 160 – 180 square metres, and three (3) for homes 220 – 270 square metres.

## Bushfire Prone Areas

Ampelair Fireproof Vent Mesh 300mm comprising Grade 304 Stainless Steel woven wire. The Ampelair Fireproof Vent Mesh has been developed to comply with the requirements of AS3959: 2018 the Australian Standard for Construction of Buildings in Bushfire Prone Areas. Use of the mesh allows for use in all BAL ratings.

For further information, please contact your local Ampelite office.

## Year-round benefits

Moisture laden air from inside the home, and outside air can condense and cause dampness. Ventilation prevents damage to ceilings and roof timbers, helps control mildew. Shaded areas of your home particularly benefit.

Ceiling insulation is less efficient when wet, and as a result more heating is needed to compensate. Ceilings can also become mildewed. Good roof space ventilation overcomes these problems and reduces costs.

In rooms that are most prone to mildew and mould formation, ventilation helps to control the rapid growth that can occur. This occurs most when humidity is present. A Superflow ventilator is an energy free supplement to an electrically powered extractor.

We recommend installation of two under eave vents to each Superflow installed to ensure correct operation.

## Your Protection

### AMPELITE AUSTRALIA PTY. LTD.

Corner Kitchen and Zenith Roads,  
Dandenong VIC 3175
